Introduction

Parichay Authenticator is a robust authentication framework that offers a variety of multifactor authentication solutions like Token Authentication and Tap Authentication to provide the access to Parichay, Jan Parichay, and others popular services. It also helps in securing the device by providing local device authentication parameters which includes Pattern, Pin, and Fingerprint.

Functionality

The application authenticates users via a two-step multi-factor authentication process where users need to provide a secondary factor of authentication along with the password.

1. Tap Authentication:

For Tap-based authentication, users are requested to tap a prompt sent by the authenticator on registered client device. The prompt will ask if the user wants to “**accept**” or “**deny**” the access request for an online application. Following are the benefits of Tap Authentication:

- Easy, quick and convenient real-time authentication solution.
- Authenticates user identity with a single tap.
- Single-tap authentication effectively helps in securing the data in a hassle-free way in addition to meeting the required compliances.
- Access Parichay/JanParichay and integrated services with a single tap.

2. Token Authentication:

For Token-based authentication, users are requested to provide a soft token generated every 30 seconds by the Authenticator web and installed application simultaneously. Following are the benefits of Token Authentication.

- This authentication factor adds a second layer of security to application, network, or service access.
- Provides seamless access to Jan Parichay and integrated services.
- Helps users access the service during the offline mode.

Prerequisite

Download the Parichay Authenticator Application on your smartphone from Google Play Store or use the icon links available on Parichay Home Page to download the application APK. (Refer fig. 1)

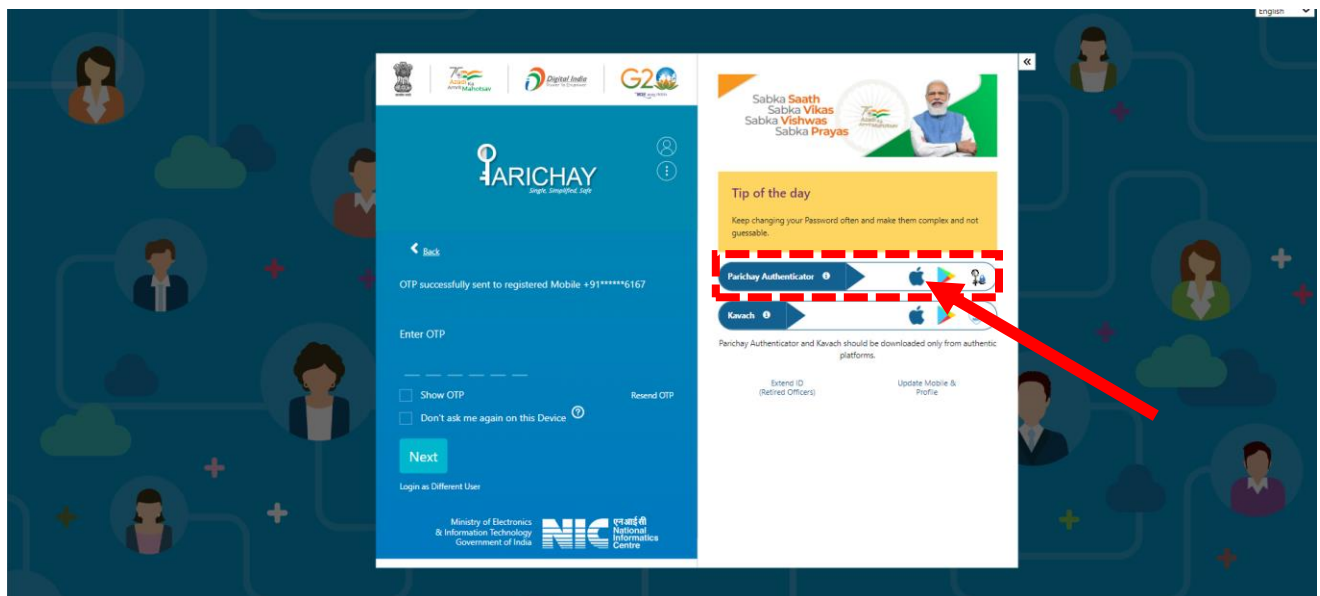

Fig. 1

Steps to enable tap/token authentication on Parichay Authenticator

Users can enable MFA by logging in to their Parichay Account and following the steps given below afterwards:

Step 1: Click on the top-right “button” to see the “Settings” option. [Refer fig. 2]

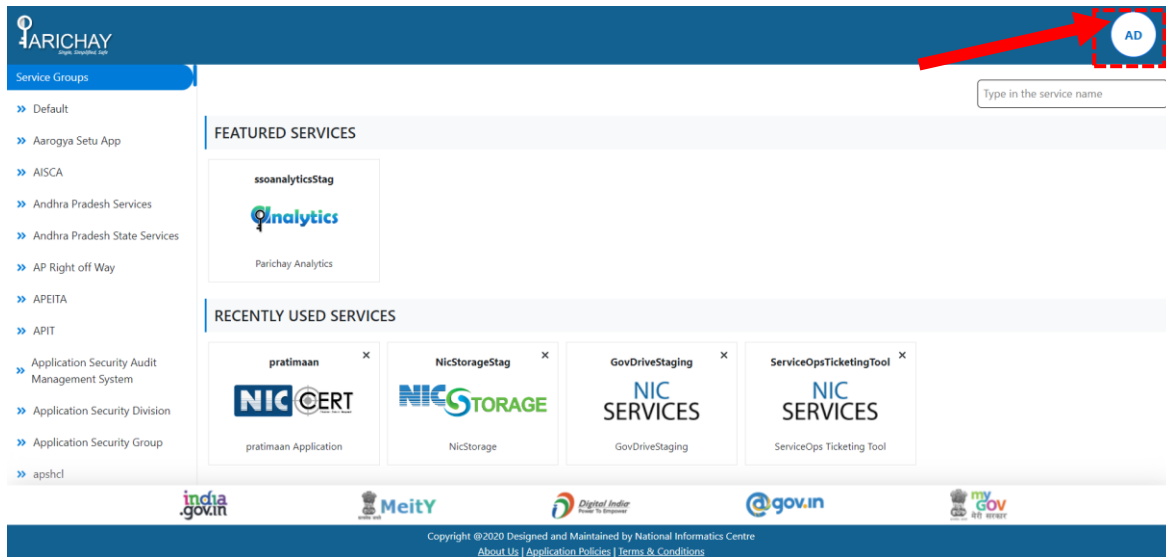

Fig. 2

Step 2: Click on the “Settings” option to proceed. [Refer fig. 3]

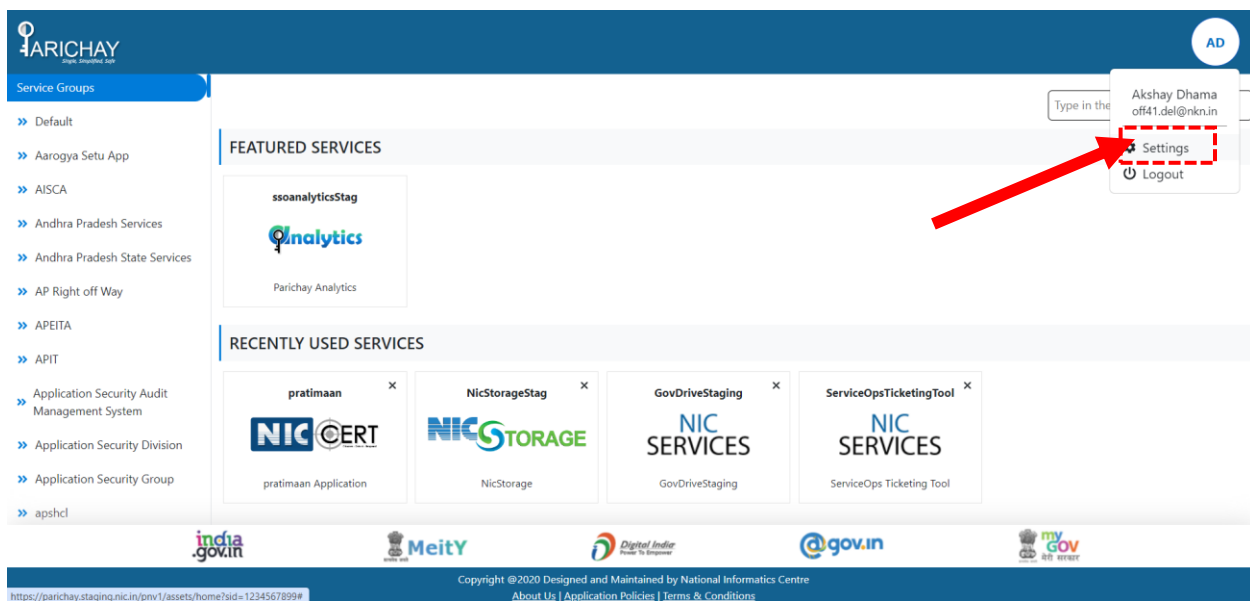

Fig. 3

Step 7: Click to switch the button from “OFF” to “ON” and enable the Multi-factor Authentication in Account Settings tab. [Refer fig. 4]

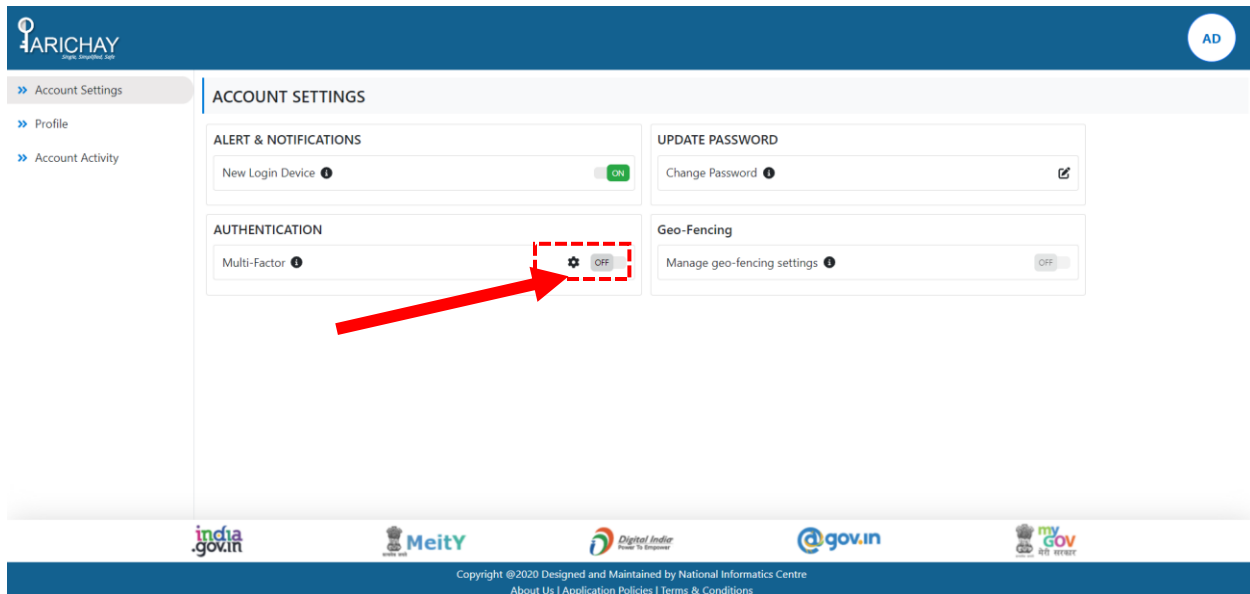

Fig. 4

Step 8: Now, scan the QR using the Scanner feature of Parichay Authenticator app on your mobile. [Refer fig. 5]

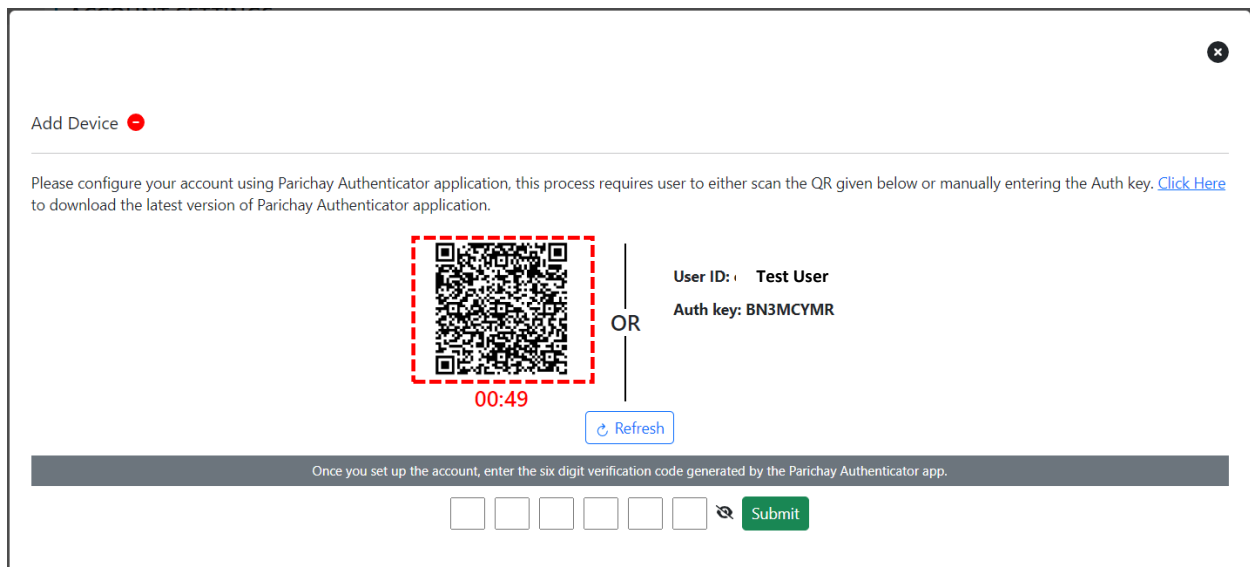

Fig. 5

Step 9: Open the Parichay Authenticator application on your smartphone (Android/iOS). Slide forward or click on the “Skip/Proceed” button. [Refer fig. 6]

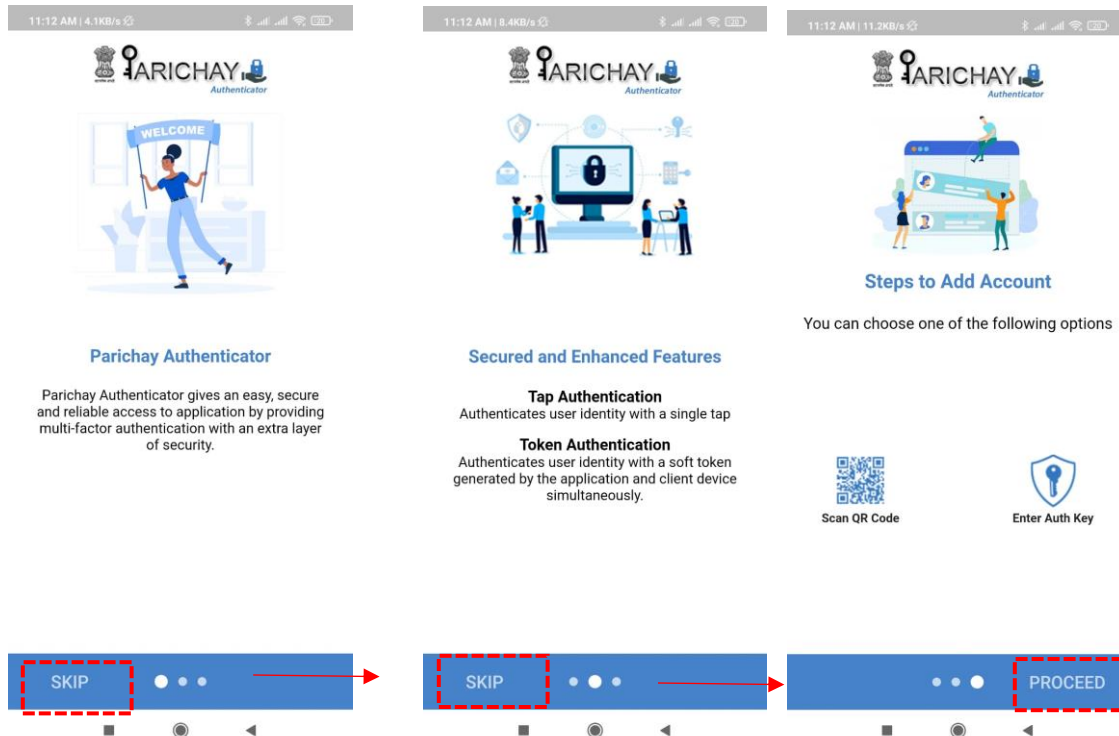

Fig. 6

Step 10: Click to choose the “Screen lock type” or “Skip” to continue. [Refer fig.]

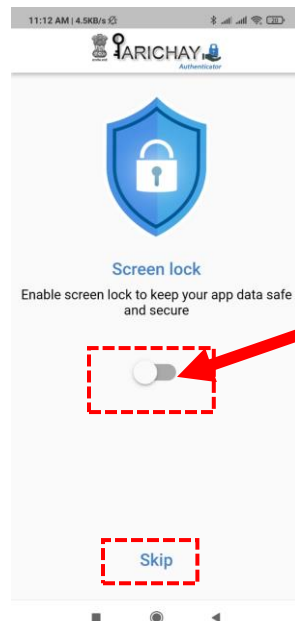

Fig. 7

Step 11.1.1: Click on the “Scan QR Code” Button. [Refer fig.]

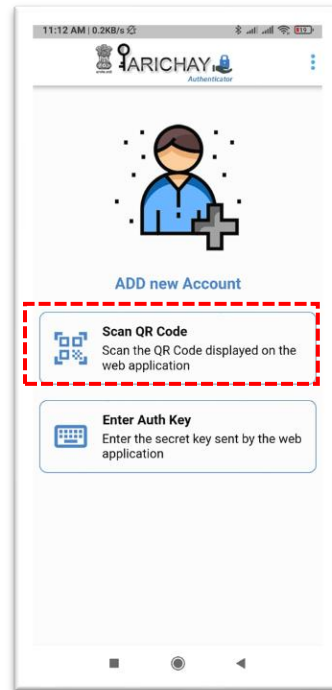

Fig.

Step 11.1.2: Scan the QR [Refer fig. 11] using the scan feature of Parichay Authenticator application. [Refer fig. 9]

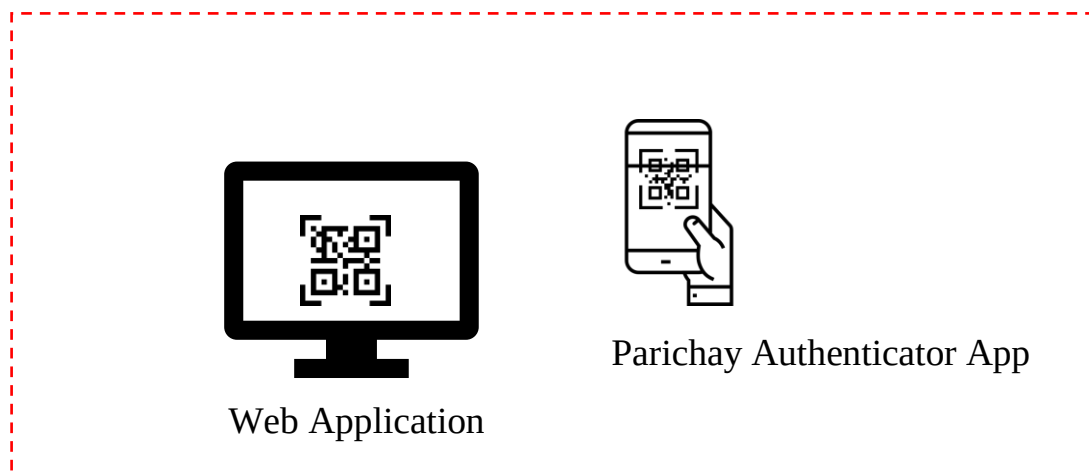

Fig. 9

Now, the user will be able to see the token on Parichay Authenticator, use this to configure your account. [Refer fig. 10]

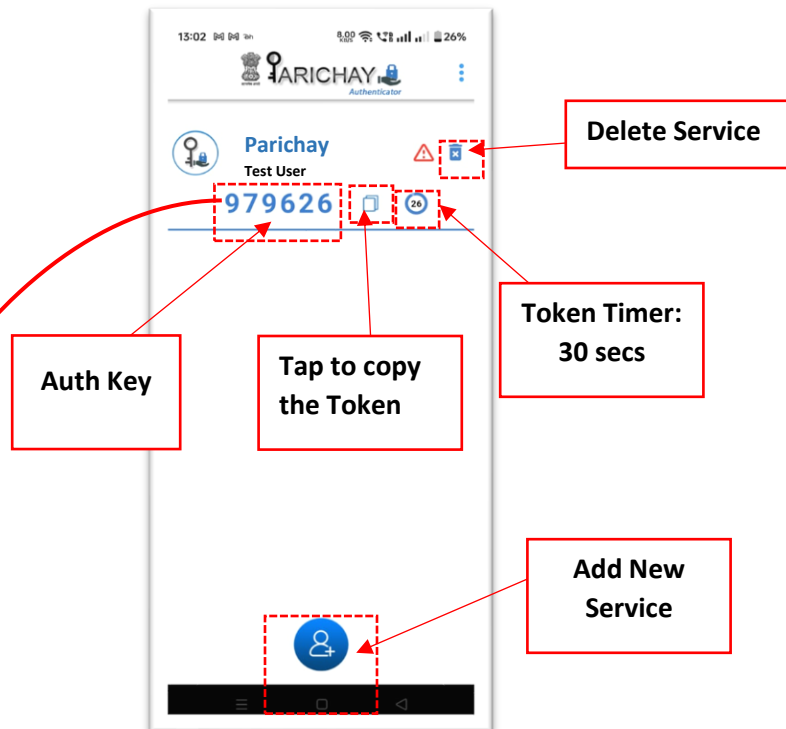

Fig. 10

Step 11.1.3: Enter the six-digit token number in the required field below the QR Code. [Refer Fig. 17]

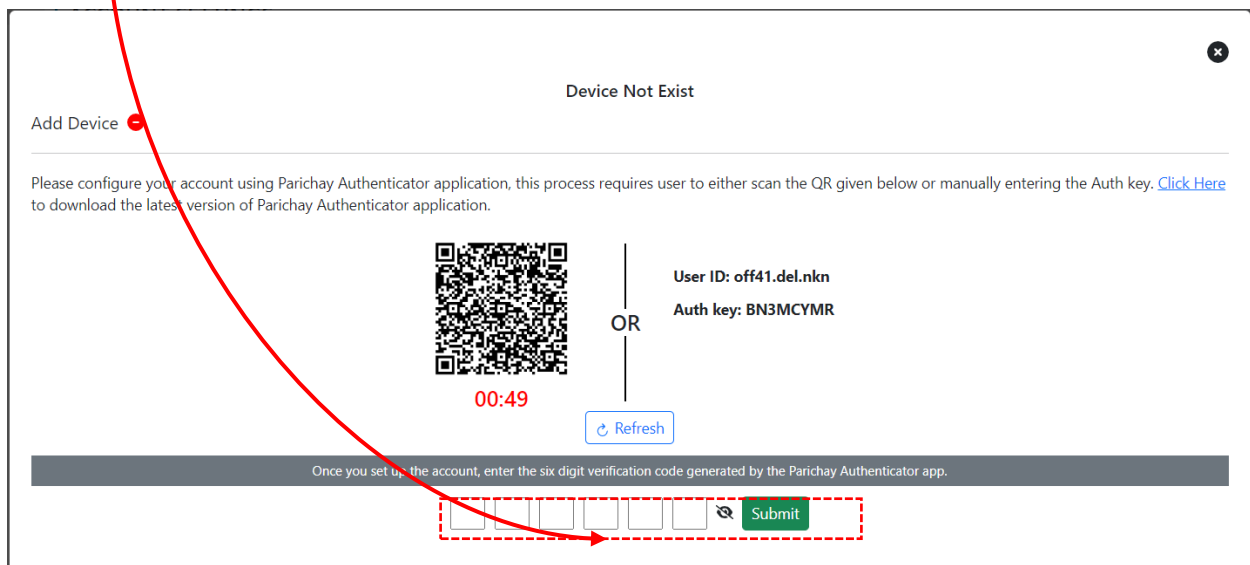

Fig. 11

Now, the user has successfully configured their account with Parichay Authenticator for both tap and token authentication.

Or

The user can configure their account using the Auth Key method by following the steps given below:

Step 11.2.1: Click on the “Enter Auth Key” Button. [Refer fig. 12]

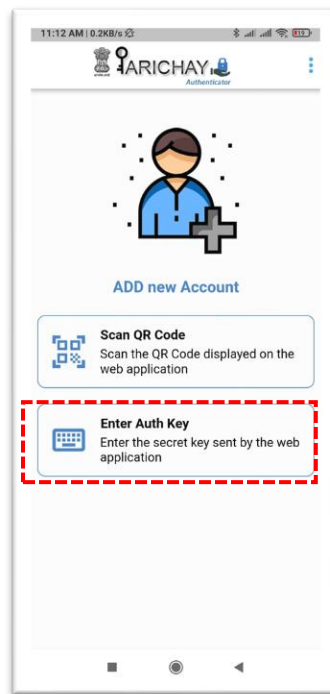

Fig. 12

Step 11.2.2: Now, Enter the “User ID” and “Auth Key” mentioned on the web screen in the required fields. [Refer fig. 13]

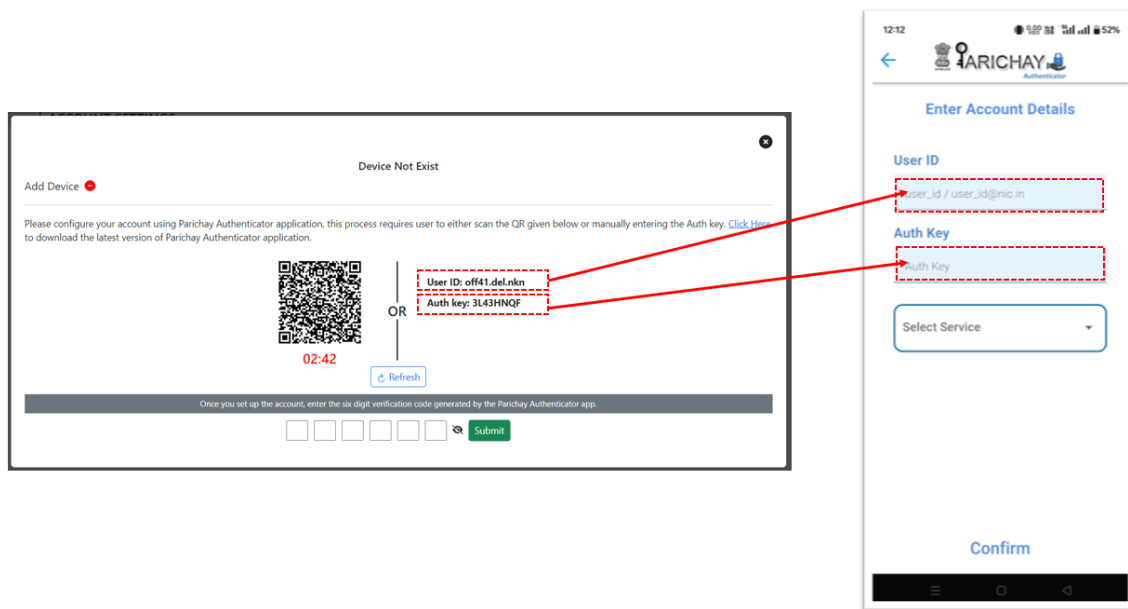

Fig. 13

Step 11.2.3: Now, tap the drop-down to choose the “Service Name” to continue. [Refer fig. 14]

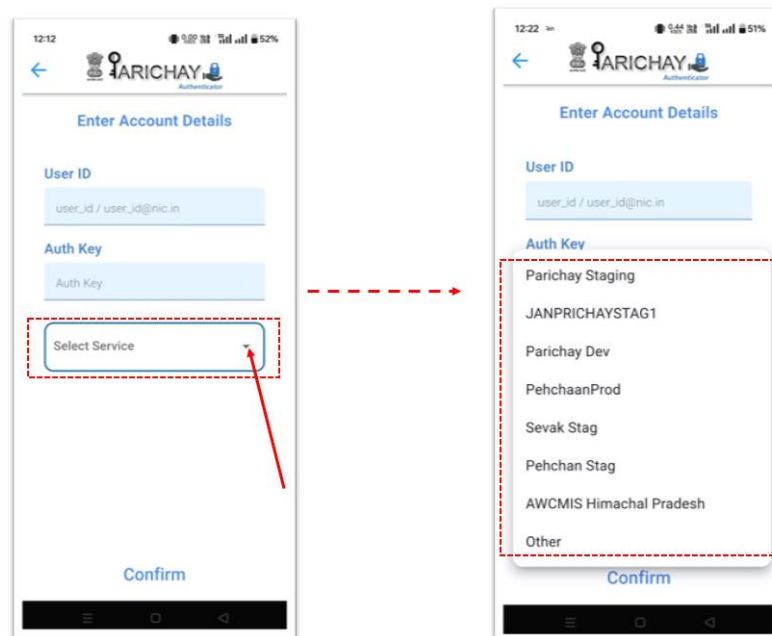

Fig. 14

Step 11.2.4: Click the “Confirm” button to continue. [Refer fig. 15]

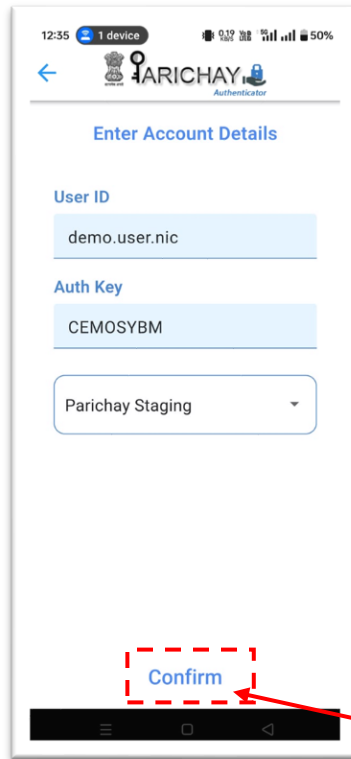

Fig. 15

Step 11.2.5: Now, copy the token from Mobile Application and paste it on the required field given on the web screen [Refer fig. 16]

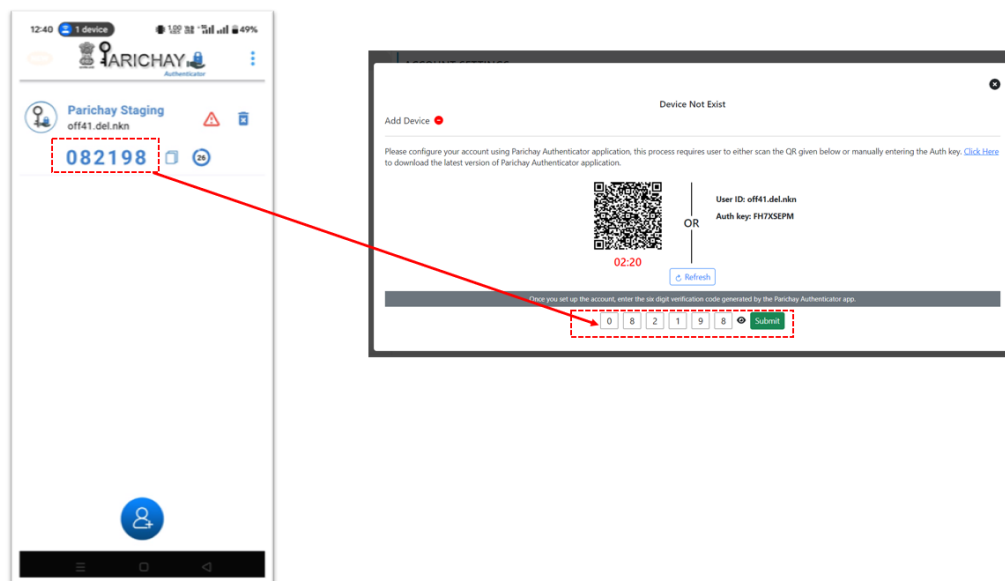

Fig. 16

Now, the user has successfully configured their account with Parichay Authenticator for both tap and token authentication. [Refer fig. 17]

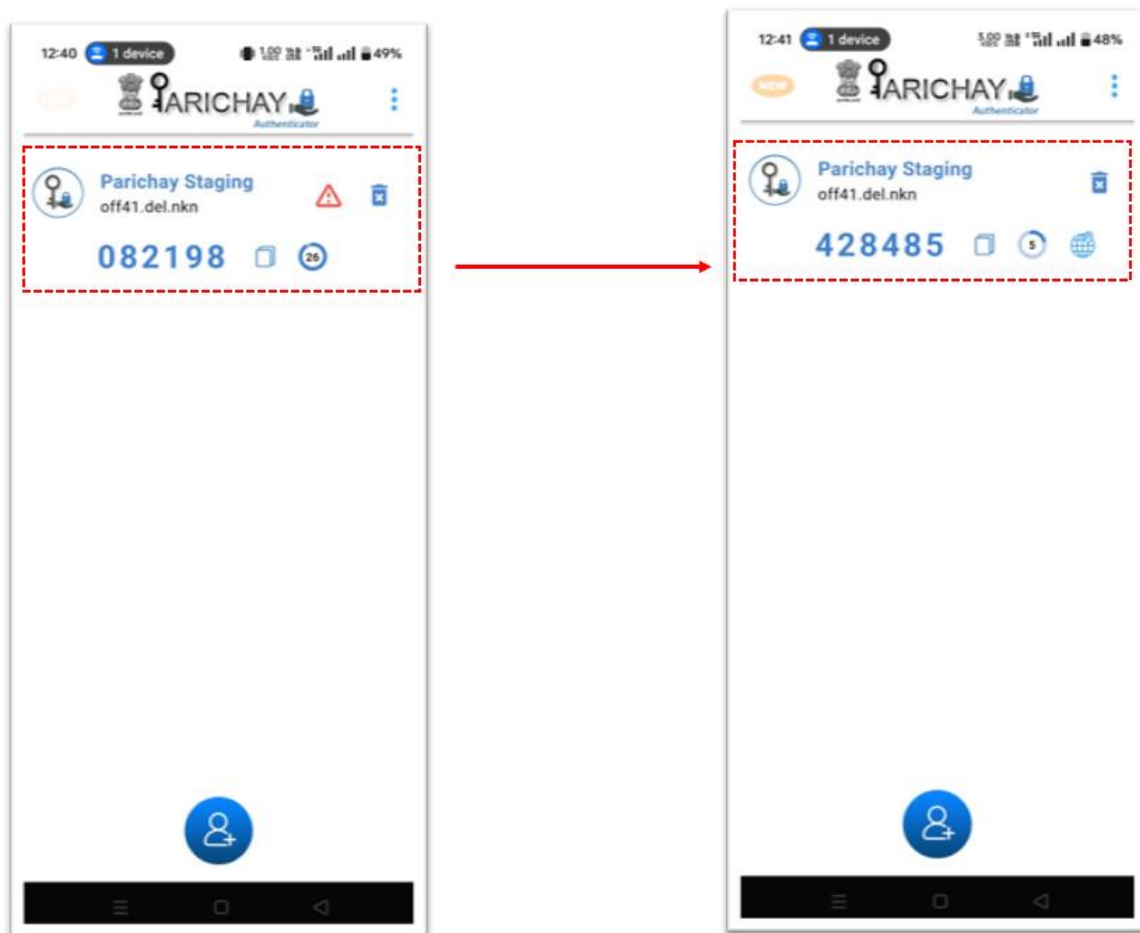

Fig. 17

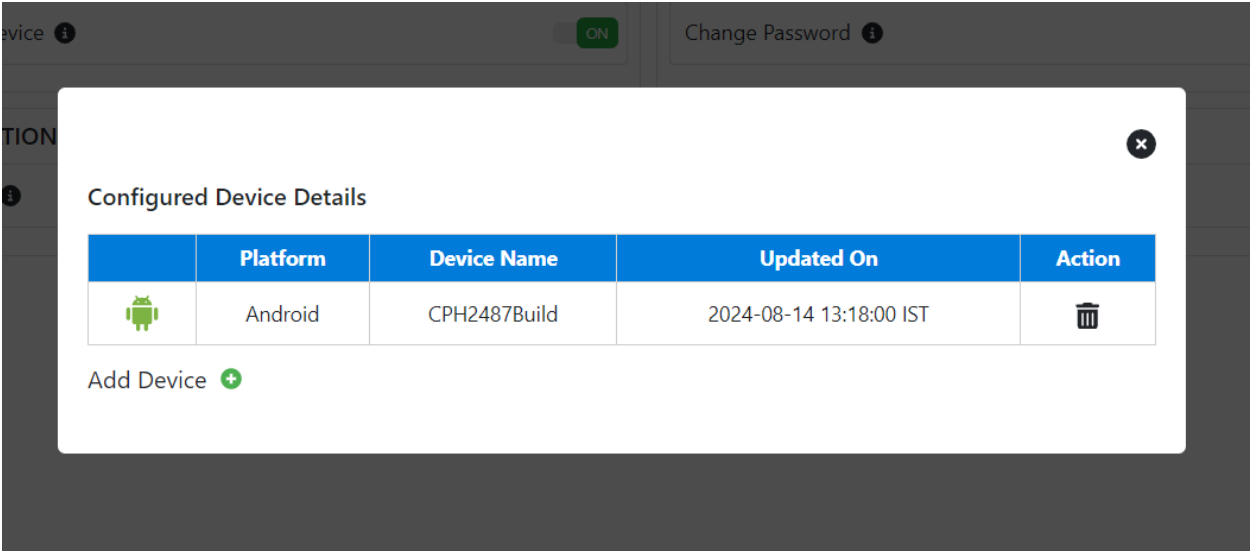

Fig. 18

MFA based Authentication

Step 1: User can choose either password-based or password-less authentication in the **first** step of login process:

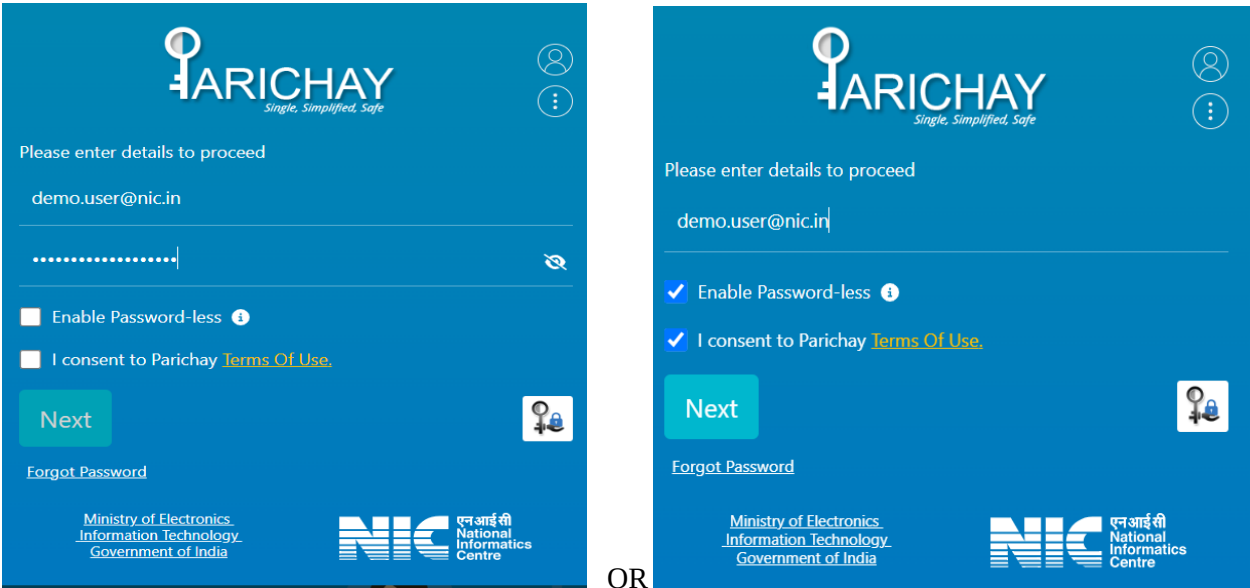

Fig. 19

>> The user will be prompted to MFA page.

Step 2: Now, choose any of the **MFA** options to continue. [Refer fig. 20]

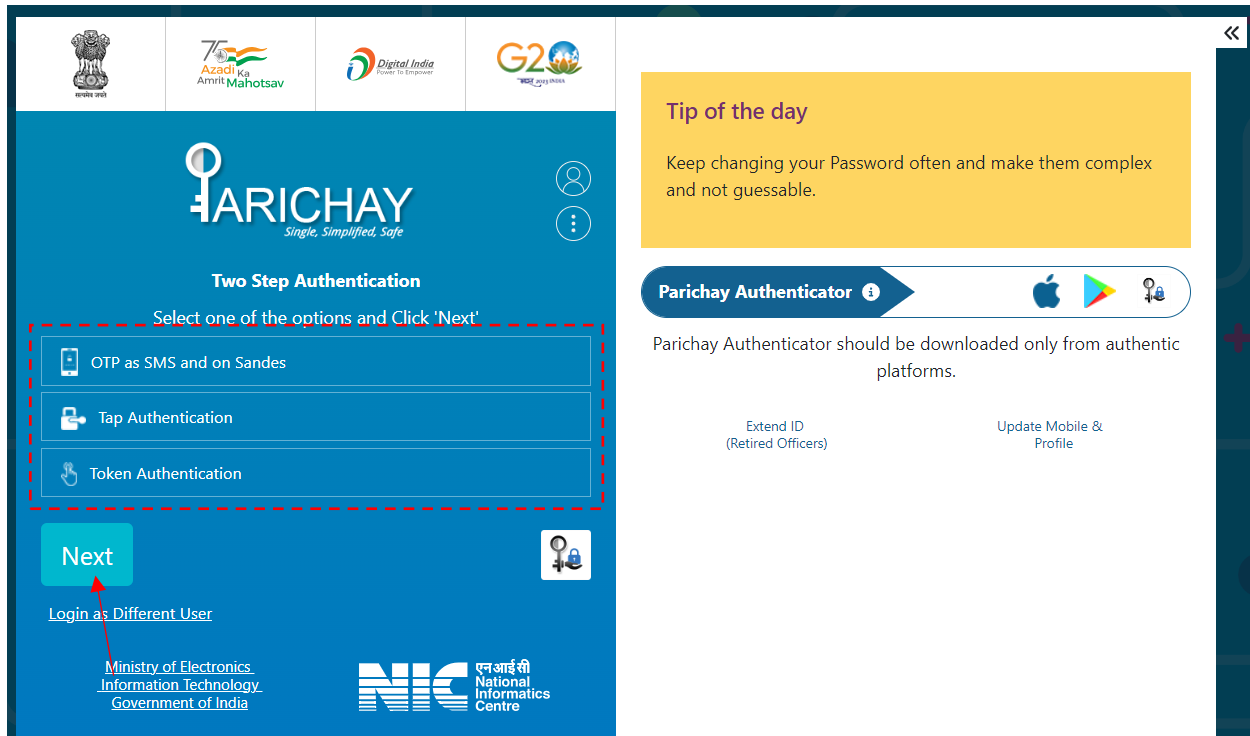

Fig. 20

>> User can choose any of the MFA options and following will be the authentication scenarios:

Step 3.1: OTP as SMS and on Sandes

Enter the **6-digit OTP** received on the registered mobile no. and click **Next** to login. [Refer Fig. 21]

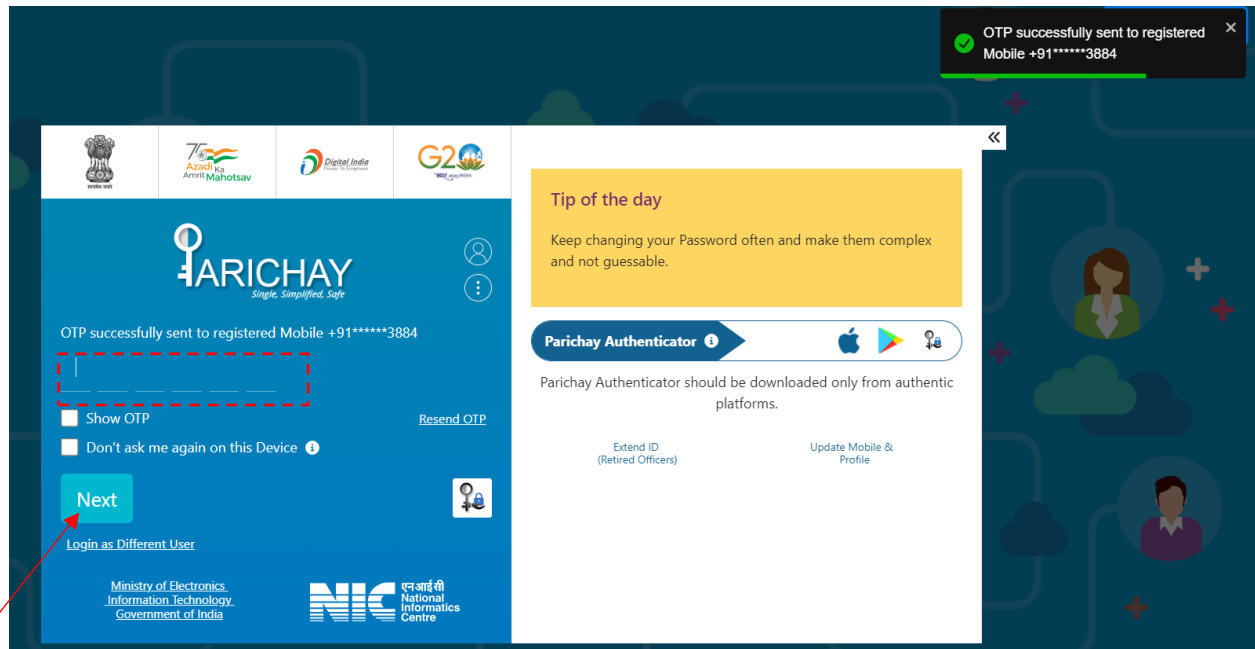

Fig. 21

>> Post-successful verification, user will be redirected to Parichay Dashboard.

Step 3.2: Tap Authentication

- User needs to choose the “**Tap Authentication**” and click “**Next**” to proceed. [Refer Fig. 22]

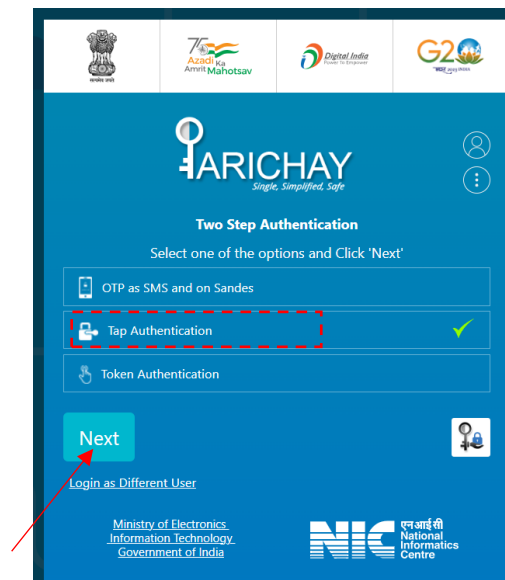

Fig. 22

Now, User needs to check the pull notification for their Parichay Authenticator App.

- b. Tap the “Accept” option to continue. [Refer Fig. 23]

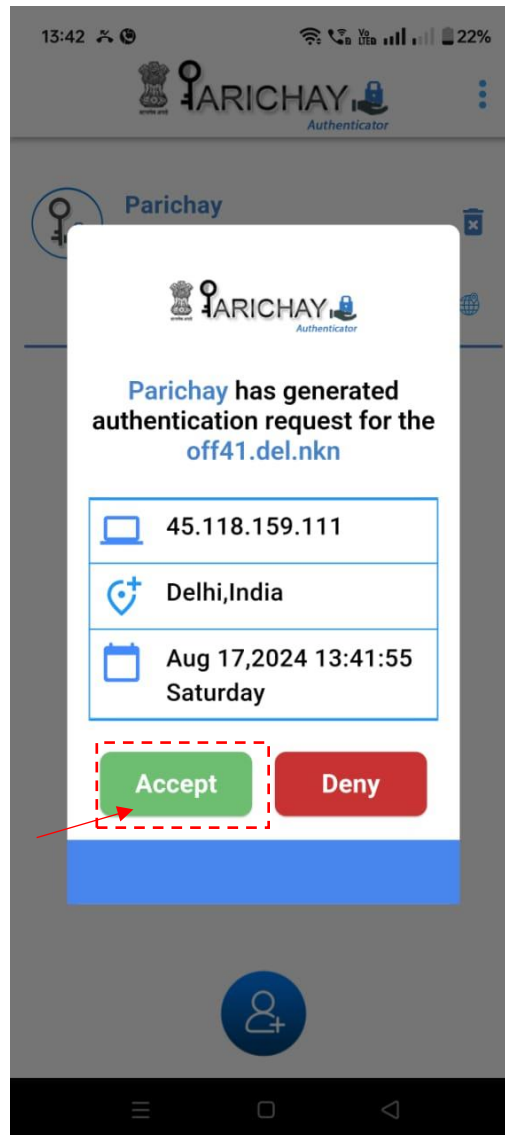

Fig. 23

>> Post-successful verification, user will be redirected to Parichay Dashboard.

Step 3.3: Token based Authentication

- a. Choose the “**Token Authentication**” and click “**Next**” to proceed. [Refer Fig. 24]

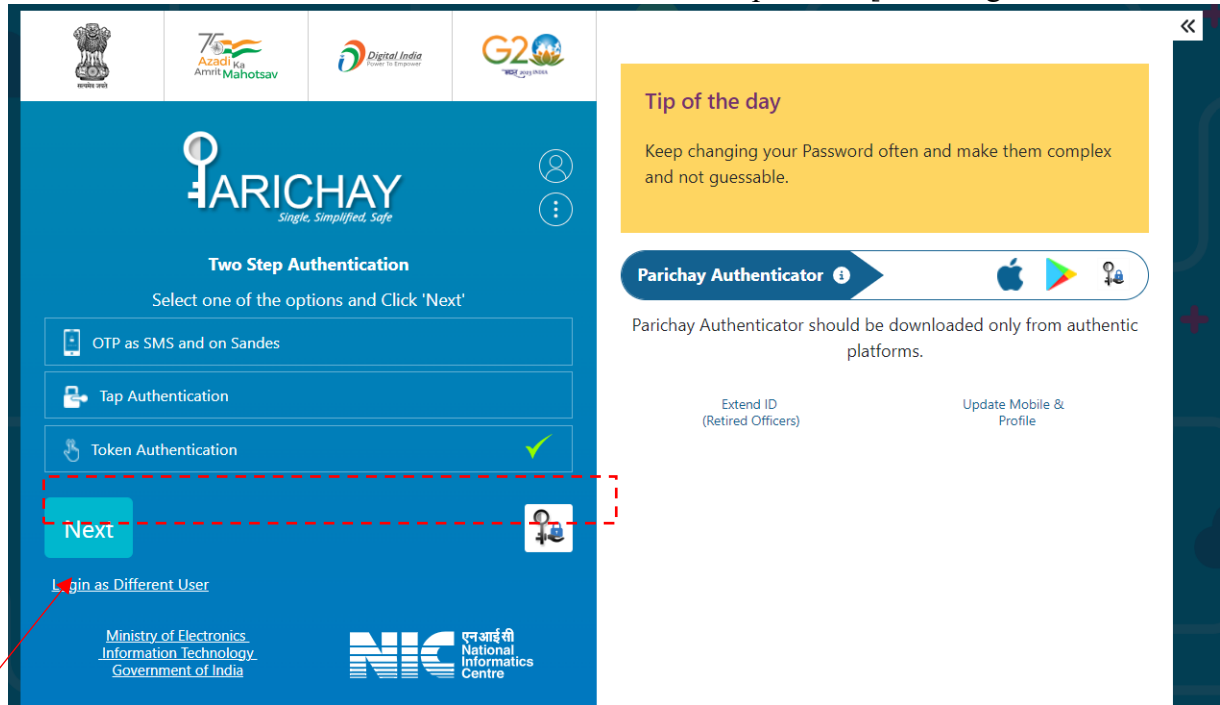

Fig. 24

Now, User needs to check the 6-digit “Token” for their Parichay Authenticator App.

- b. Enter the “Token” in the required field to continue. [Refer Fig. 25]

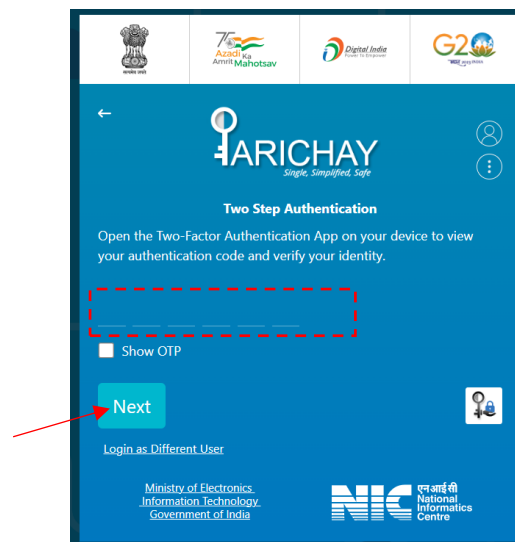

Fig. 25

>> Post-successful verification, user will be redirected to Parichay Dashboard.

Geofencing

User can manage geofencing for their Parichay Account accessibility via Parichay Authenticator Application. Following is the step-wise procedure:

Step 1: Open the Parichay Authenticator application configured with Parichay Account and Click the “**Geofencing**” icon to proceed. [Refer Fig. 26]

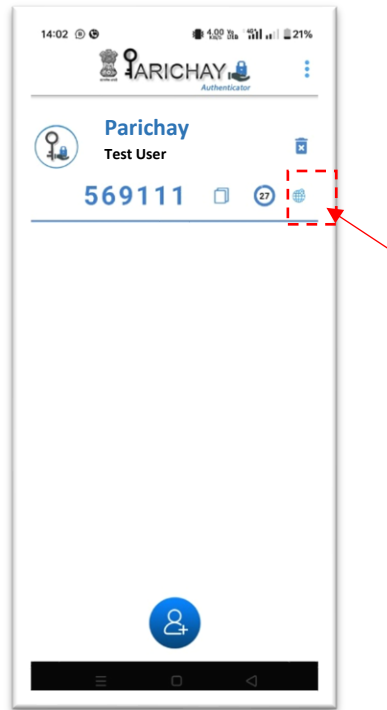

Fig. 26

Step 2: Click to switch the button and enable Geofencing Settings. [Refer Fig. 27]

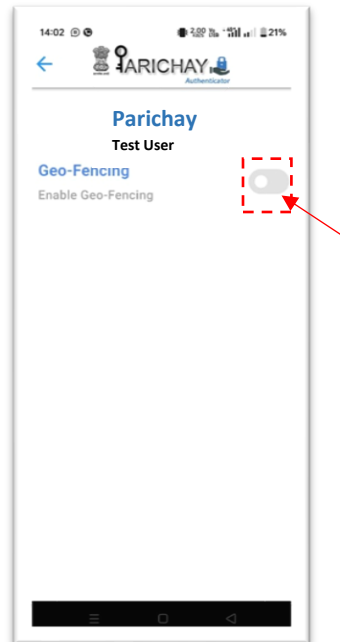

Fig. 27

Step 3: Now, click the “Manage” button to view the list of countries. [Refer Fig. 28]

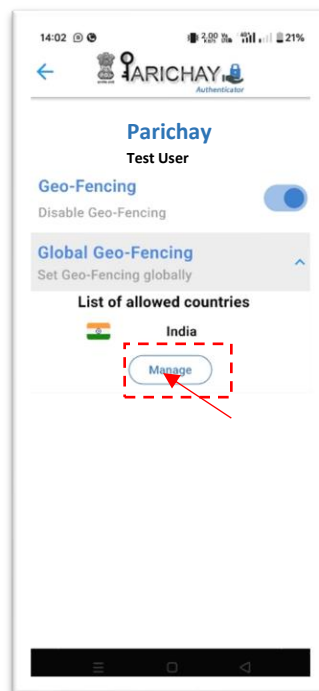

Fig. 28

Step 4: Mark/unmark to choose the **countries** as per your requirements. [Refer Fig. 29]

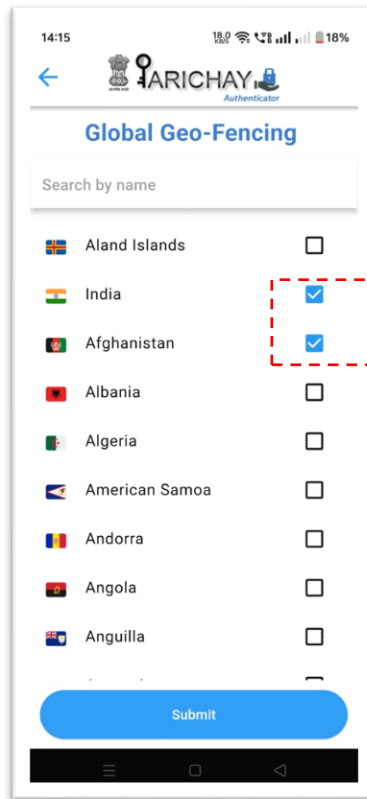

Fig. 29

Step 5: Now, click the “**Submit**” button and press back to view the applied changes. [Refer Fig. 30]

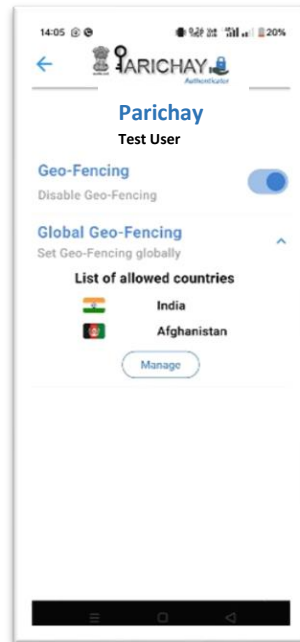

Fig. 28

Pull Notification

Parichay Authenticator provides user with an additional functionality of using Pull Notification to view the notification (if not received directly) from the application. The option is required when there is a weak network connectivity or has higher latency in firebase notification. [Refer Fig. 29]

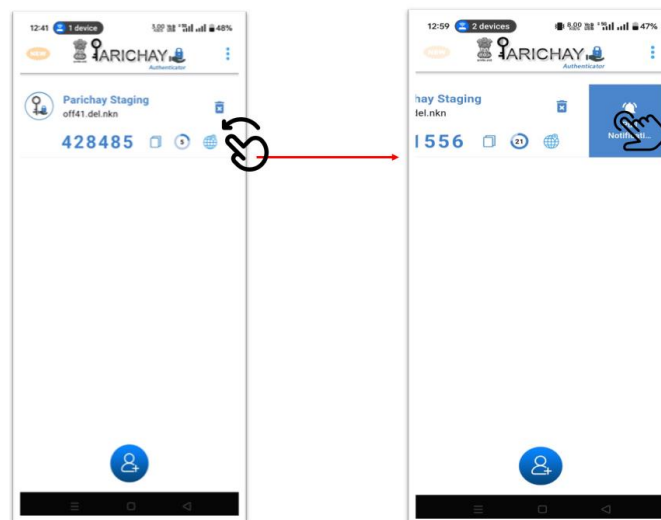

Fig. 29

Edit Username

Users can edit their username by “pressing” the account for 2 seconds. The feature provides users with the flexibility to use custom user names on service cards. [Refer Fig. 30]

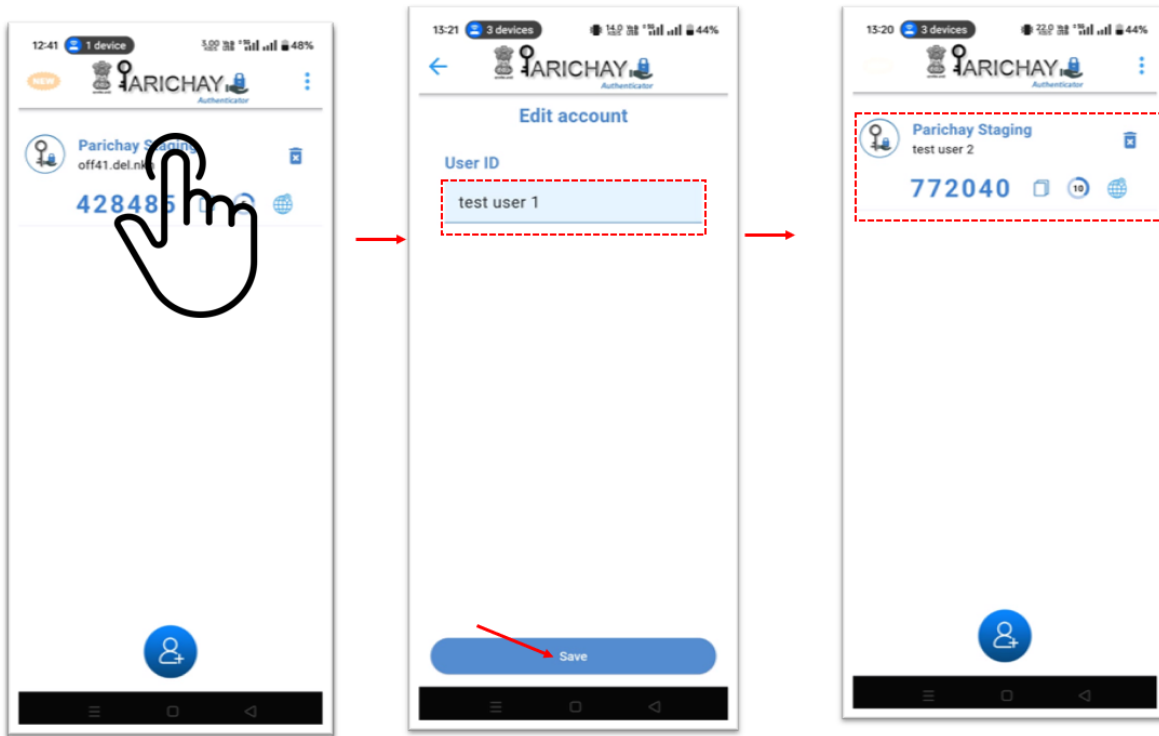

Fig. 30

What's New Section

The button “**what's new**” provided at the top-left corner of the screen, enables the users to access the list and details of latest functionalities related to the Authenticator application. [Refer Fig. 31]

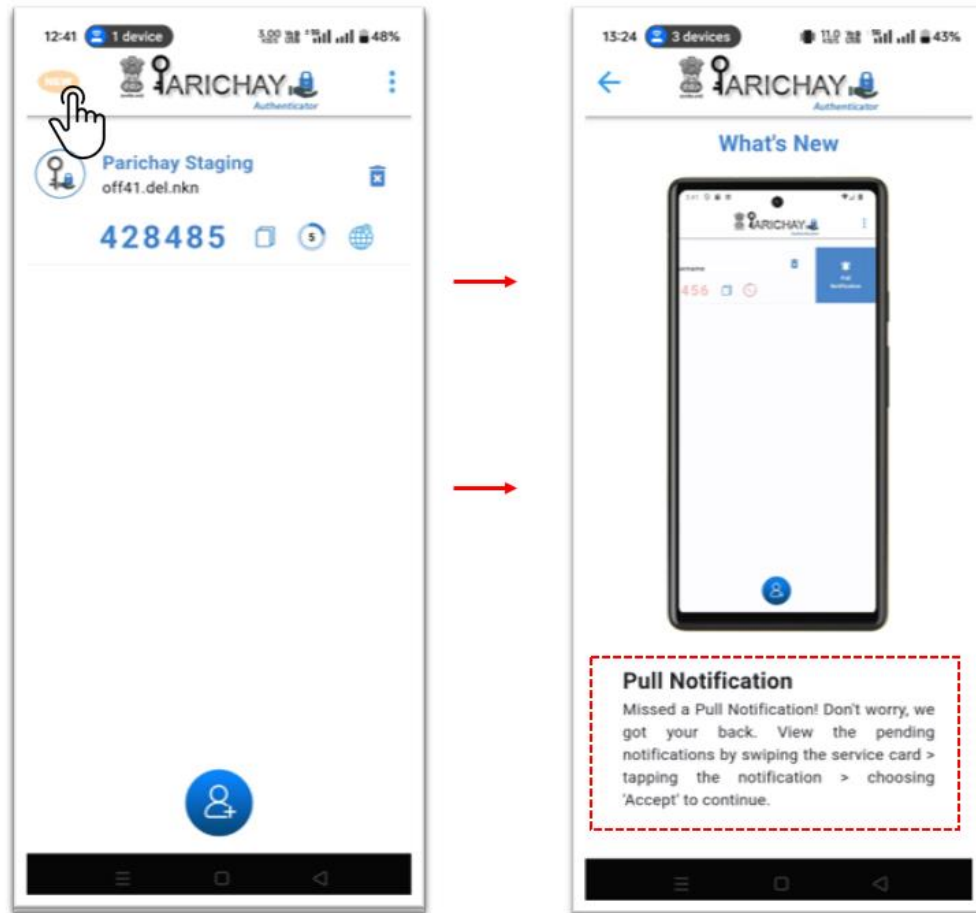

Fig. 31

User Support

One can click the top-left menu to see and choose the user support options such as: FAQs, About Us, and Change Screen lock. (Refer fig. 32)

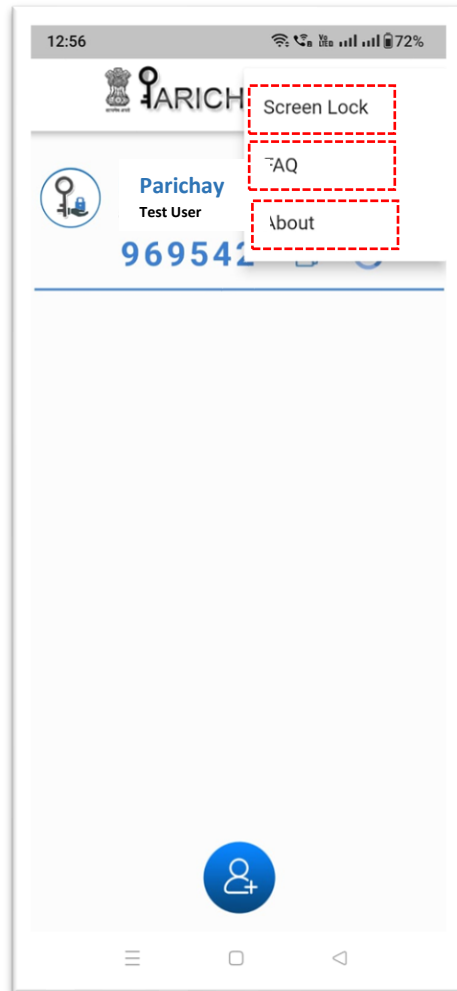

Fig. 32

Annexure: A

Multi-factor Authentication

Multifactor authentication is a security system that utilizes more than one method of user identification for a login or other transaction. This provides an additional layer of security over traditional forms of single sign-on authentication, which require only one type of identification such as a password.

Multi-factor Authentication Type	Description
OTP	A one-time dynamic password that is valid only for 10 min
	The web application sends OTP to the registered mobile no./email Id
Tap	The web application sends a tap notification to the mobile app with 'Accept' and 'Deny' options. On clicking Accept, the user will login to Parichay/Jan Parichay-Meri Pehchaan
	The access is denied either on clicking Denied or after 60 seconds whichever is earlier. After denial, the user is redirected to the login page.
Token	Parichay Authenticators app simultaneously generates a token every 30 seconds.
	Even if the device/mobile has no access to the network, the user can enter this token to log into the Jan Parichay.

Note: - The Token will start blinking **RED** in color to aware user about the last 5 seconds of token validity, after that the Token number will be updated.
